Bees and Wasps – Picture This

No Protection from bees!!!

Look at the image above, there is a man working around bees without any personal protective equipment. Going to work around bees with no suit, you are sure to be stung. Bees in general are protective of their home and honey and you are an invader. Don’t be fooled by their seeming docility as they can get aggressive if they feel threatened in anyway.

Some protective clothing you can wear when working around stinging insects are a full protective suit, gloves or a hat & veil. Always remember to use caution when working in or around areas with insects that could harm you.
