Chemical Safety Course

Key Takeaways:

– Identifying all workplace chemical hazards and the risks associated with them.
– Understanding the conditions which present an exposure risk, possible routes of exposure, and the factors influencing an individual’s reaction to a chemical exposure incident.
– Practicing safety precautions on the behalf of both workers and employers to minimize exposure to chemicals.
– Learning safe storage, transport, and disposal practices for hazardous chemicals.
– Understanding appropriate response actions in the event of a chemical incident.

Course Description

This course will teach trainees to recognize chemical hazards in the workplace, being able to detect them, protect themselves and understand existing Hazcom programs.
