

Environmental Hazards – Hospitality Infographic

The Future of Hotels is GREEN

IN THE UNITED STATES, HOTELS REPRESENT:

More than **5 billion** square feet of space

US Hotels spend over
\$7.5 billion
on energy each year

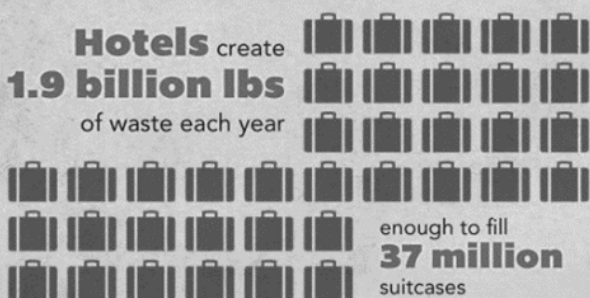

equal to
the worth of
12 Queens
of England

But what would happen if all hotels
reduced their carbon footprint and went

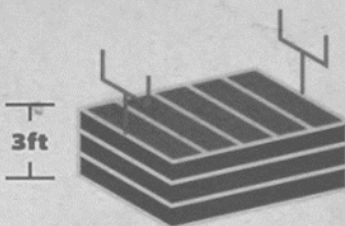

green?

WASTE

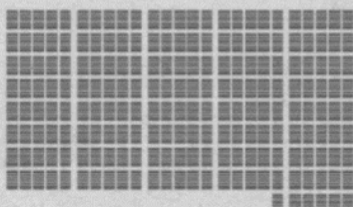

Hotels create
1.9 billion lbs
of waste each year

Green Standard
Buildings send
50-75%
less waste to
landfills

Saving over
206 football fields
packed
3 feet deep
of landfill space
