

Hazardous Weather Around Water Infographic

HOW TO SURVIVE A RIP CURRENT

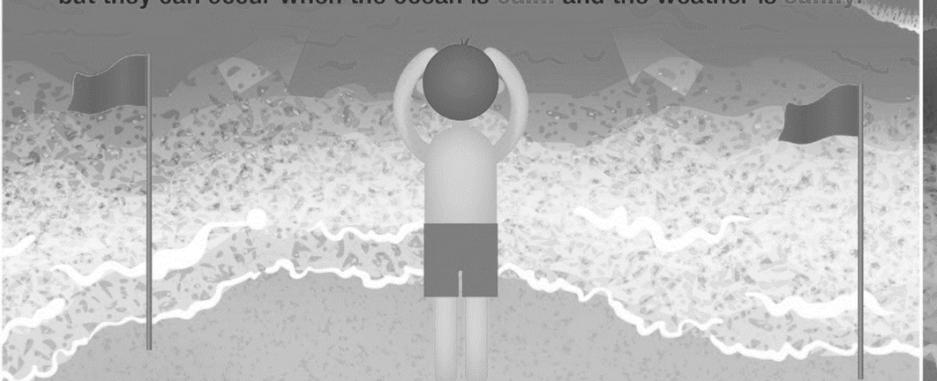

A RIP CURRENT IS A CHANNEL OF WATER FLOWING AWAY FROM SHORE

If caught in a rip current, do not swim against it!
Swim out of the current in a direction parallel to the shoreline.
Remain calm to conserve energy!

SIGNS OF RIP CURRENT

Rip currents are common when it's windy, but they can occur when the ocean is calm and the weather is sunny.

ALWAYS KEEP AN EYE ON THE SURF

Whenever possible, swim at a lifeguard-protected beach.
If you see someone in trouble, get help from a lifeguard or call 911!
