HOW TO: The User Experience

Key Takeaways:
– Learning about the user experience considerations behind the design of Bridge

Course Description
In part of our 8-piece Bridge curriculum, this course will teach you about the user experience design within Bridge. Bridge has been designed to be powerful but easy to understand and use. Through this course, you will learn about how the parts of Bridge are designed and the overview of what you can do in Bridge. Somewhat like a bird’s eye view, you will gain a perspective of the surface of this platform. We will discuss what Bridge looks like for learners through the courses they are required to take and the additional ones they wish to take. As well, we will look at the course creation process, putting courses into a program, live-training sessions, categorizing learners into groups, and analyzing user data, on the outer layer of operations. Our hope with this course is to quickly show you what can be done in Bridge to enrich the knowledge of your users.
