## Landscaper Safety Infographic

## >> HEALTH AND SAFETY BENEFITS

Healthy, managed landscapes make people and their communities healthier.

In addition, they protect against outdoor pests that can transmit disease to people and pets.

Ticks can transmit Lyme disease, Rocky Mountain spotted fever, ehrlichlosis and babesiosis.

Fleas can transmit tapeworms to pets, as well as murine typhus and, occasionally, the bubonic plague to humans.

Fire ants can cause painful blisters and sometimes severe or life-threatening anaphylaxis.

Mosquitoes can transmit West Nile, Zika, malaria, chikungunya, dengue and a host of other bacterial and viral diseases.

## >> A HEALTHY LANDSCAPE HAS...

Not all grass, plants or trees are healthy. Healthy landscapes take effort, skill and know-how.

HEALTHY SOIL

NO PLANT-DAMAGING PESTS OR DISEASE

FEW WEEDS

HEALTHY GRASS, SHRUBS & TREES

## >> ENVIRONMENTAL BENEFITS

The value of managed lawns and landscapes extends beyond the backyard and into the community at large.

CLEAN & PURIFY AIR PROVIDE OXYGEN MINIMIZE NOISE

ACT AS NATURAL COOLANTS
