OSHA Program Wizard: Energy Control Program and Procedures (Lockout/Tagout)

This program establishes a means of control to safeguard employees from the unexpected energization or startup of machinery and equipment, or the release of hazardous energy during service or maintenance activities.
The purpose of this safety program is to aid business owners with their Federal OSHA compliance efforts. Each business is unique and this wizard guides you through the required customization. As the program is customized, remember to only include words, sections, concepts, procedures, etc. that are relevant to the operations. The purpose of any written safety program is to provide a clear and consistent plan for addressing safety in a particular area of focus.
