

# OSHA Program Wizard: Respiratory Protection

This program protects those employees performing operations for which exposures cannot be controlled by use of conventional engineering or administrative controls – prior to establishing a negative air exposure assessment – and to require that respiratory protective equipment is selected, used, maintained, and stored in accordance with acceptable practices.

The purpose of this safety program is to aid business owners with their Federal OSHA compliance efforts. Each business is unique and this wizard guides you through the required customization. As the program is customized, remember to only include words, sections, concepts, procedures, etc. that are relevant to the operations. The purpose of any written safety program is to provide a clear and consistent plan for addressing safety in a particular area of focus.
