

OSHA Program Wizard: Safety Observations

A Safety Observations Program will assist your supervisors with observing and correcting any unsafe acts and conditions in reducing overall accident frequency.

The purpose of this safety program is to aid business owners with their Federal OSHA compliance efforts. Each business is unique and this wizard guides you through the required customization. As the program is customized, remember to only include words, sections, concepts, procedures, etc. that are relevant to the operations. The purpose of any written safety program is to provide a clear and consistent plan for addressing safety in a particular area of focus.
