

OSHA Program Wizard: Subcontractor Safety

This program provides guidelines for the review and approval of contractors and subcontractors by determining whether potential contractors (including suppliers and vendors) meet their risk management, insurance, and general liability obligations prior to formalizing a contract.

The purpose of this safety program is to aid business owners with their Federal OSHA compliance efforts. Each business is unique and this wizard guides you through the required customization. As the program is customized, remember to only include words, sections, concepts, procedures, etc. that are relevant to the operations. The purpose of any written safety program is to provide a clear and consistent plan for addressing safety in a particular area of focus.
