

Roll Over Protection Infographic

Rollover Protective Structure (ROPS)

A rollover protective structure is a steel bar or a cabin designed to protect the operator from getting seriously injured or pinned by the machine if the tractor overturns.

ROPS preventing injuries

Rolling over

Drive at appropriate speeds and avoid sharp turns. And remember, slow down on bumpy roads.

Overturning

Make sure there's always counterweight added when attachments are in place.

Falling-off

Always keep safe distance from ditches and the edge of the road.
