

# Tree Trimming Safety Infographic

## TREE TRIMMING<sup>®</sup> IN CALIFORNIA

### WHY TRIM OR PRUNE TREES?

-  Improve tree strength
-  Reduce maintenance cost
-  Increase tree longevity
-  Prevent tree decay and rot and disease from spreading

### FUN FACTS TO KNOW

-  After long tree branches have been trimmed, nutrients will go and stay within the trunk of the tree. This helps the tree to be stronger and helps the tree to get rid of diseases.
-  Pruning dead or damaged branches will help the tree to focus on new healthy growth.
-  Branches that are touching or rubbing against each other can potentially create area for insects and diseases to thrive.
-  Pruning helps to create space so more air circulation so the center of the tree doesn't develop rot and fungal diseases.
