True or False
5. Workers need to worry about not only the possibility of themselves falling from scaffolding that is improperly erected or maintained, but also the possibility of tools and other materials falling and hurting others.  
True or False

### **What Would You Do?**

Your boss tells you that a project needs to be completed today. You notice that there's a large crack running down one of the support planks, some bracing is bent and the wind is really starting to pick up. Would you voice your concern about these safety issues? Or would you keep quiet, do your job and hope you make it home tonight?
